

# MagIso™ Anti-MERS-CoV Spike Protein S1 Magnetic Particles Immunoprecipitation (IP) Kit

**Catalog Number: WHK-SN008** 

Please read this instruction manual carefully before using the product

## **Product Contents**

|   | Contents   | Package 1 (20 Tests)      | Package 2 (100 Tests) | Storage             |
|---|--|---------------------------|-----------------------|---------------------|
| 1 | Anti-MERS-CoV Spike Protein<br>S1 Magnetic Beads <sup>13</sup> | 1 mL                      | 5 mL                  | 2-8°C for 12 months |
| 2 | NP40 Cell Lysis Buffer <sup>2</sup>                            | 4 mL                      | 22 mL                 | -20°C for 12 months |
| 3 | 5×TBST (pH7.4)   | Required but not supplied |                       |                     |
| 4 | 1×TBST (pH7.4)   | Required but not supplied |                       |                     |
| 5 | ddH <sub>2</sub> O   | Required but not supplied |                       |                     |
| 6 | Alkaline Elution Buffer  | 3 mL                      | 15 mL                 | 2-8°C for 12 months |
| 7 | Acidity Elution Buffer   | 3 mL                      | 15 mL                 | 2-8°C for 12 months |
| 8 | Neutralization Buffer  | 2 mL                      | 8 mL                  | 2-8°C for 12 months |

<sup>[1]</sup> The IP KIT contains anti-MERS-CoV Spike Protein S1 Immunomagnetic Beads(2 mg/mL) in phosphate buffered saline (PBS, pH 7.4) with sodium azide (0.1%).

# **Product Description**

The Anti-MERS-CoV Spike Protein S1 Immunomagnetic Beads, conjugated with Anti-MERS-CoV Spike Protein S1 antibody, are used for immuneprecipitation (IP) of MERS-CoV Spike Protein S1 proteins which expressed in vitro expression systems and bacterial and mammalian cell lysates.

For IP, the beads are added to a sample containing MERS-CoV Spike Protein S1 proteins to form a bead-protein complex. The complex is removed from the solution manually using a Magnetic Separator. The bound MERS-CoV Spike Protein S1 proteins are dissociated from the Immunomagnetic Beads using an elution buffer.

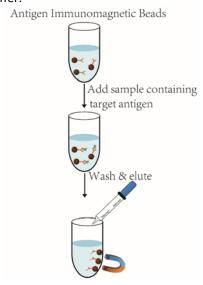

Fig. 1 Immunoprecipitation (IP) Protocol

# **Antibody Information**

Antibody: MERS-CoV Spike Protein S1 Antibody,

Mouse MAb

Immunogen: Recombinant MERS-CoV (NCoV / Novel

coronavirus) Spike Protein S1 Protein

Clone ID: 23

Isotype: Mouse IgG1

**Specificity:** MERS-CoV (NCoV / Novel coronavirus) Spike

Protein S1

**Preparation:** This antibody was produced from a

hybridoma resulting from the fusion of a mouse myeloma with B cells obtained from

a mouse immunized with purified, recombinant MERS-CoV (NCoV / Novel coronavirus) Spike Protein S1

coronavirus) Spike Protein S1 . The IgG fraction of the cell culture supernatant was purified by Protein A

affinity chromatography.

**Applications:** IP, Minimum Protein Purification

Notes: The applications have notbeen validated with corresponding viruses.

Tel: 1-631-624-4882 Fax: 1-631-938-8221

<sup>[2]</sup> Using NP-40 cell lysate buffer in the kit is required, otherwise, the magnetic beads may be precipitated.

<sup>[3]</sup> Immunomagnetic Beads kits are shipped at ambient temperature in which immunomagnetic beads are provided in liquid buffer.

## **Protocol**

The protocol (Fig. 1) uses 50  $\mu$ L Anti-MERS-CoV Spike Protein S1Immunomagnetic Beads, but this can be scaled up or down as required.

#### **Cell Lysis**

Cells may be lysed using any standard cell lysis protocol in accordance with your starting materials. We suggest using NP40 Cell Lysis Buffer (supplied with kit).

#### **Immunoprecipitate Target Antigen**

- 1. Add 50  $\mu L$  of Immunomagnetic Beads into a 1.5 mL microcentrifuge tube.
- 2. Add 150  $\,\mu L$  of 1× TBST buffer to the Immunomagnetic Beads and gently vortex to mix.
- 3. Place the tube into a Magnetic Separator to collect the beads against the wall side of the tube. Remove and discard the supernatant.
- 4. Add 1 mL of 1×TBST buffer to the tube. Invert the tube several times or gently vortex to mix for 1 min. Collect Immunomagnetic Beads with a Magnetic Separator. Remove and discard the supernatant.
- 5. Add the sample containing target protein (Cell lysate: 0.5-1mg; Recombinant protein: 5-25  $\mu$ g) to the pre-washed Immunomagnetic Beads, add 1×TBST buffer until final volume to 200-500  $\mu$ L, and incubate at 37°C for 20-30 min (or at room temperature for 2-3h) with mixing.
- Collect the Immunomagnetic Beads with a Magnetic Separator, remove the unbounded sample and save for analysis.
- 7. Add 300  $\mu$ L of 5×TBST buffer to the tube and gently mix. Collect the Immunomagnetic Beads and discard the supernatant. Repeat this wash twice.
- 8. Add 300  $\mu L$  of ddH $_2O$  to the tube and gently mix. Collect the Immunomagnetic Beads on a Magnetic Separator and discard the supernatant.

#### Elute Target Antigen.

- A. Alkaline Elution
- 1. Add 100 µL of Alkaline Elution buffer to the tube.
- 2. Gently vortex to mix and incubate the sample at room temperature on a rotator for 5 min.
- 3. Magnetically separate the Immunomagnetic Beads and save the supernatant containing the target antigen.
- 4. To neutralize the sample, add 50  $\mu L$  of Neutralization Buffer for each 100  $\mu L$  of eluate.

#### B. Acidity Elution

- 1. Add 100 µL Acidity Elution Buffer.
- 2. Gently vortex to mix and incubate the sample at room temperature on a rotator for 5-10 min.
- 3. Magnetically separate the Immunomagnetic Beads and save the supernatant containing the target antigen.
- 4. To neutralize the low pH, add 15  $\mu L$  of Neutralization Buffer for each 100  $\mu L$  of eluate.

### C. Denaturing Elution

- 1. Add 10  $\mu\text{L}$  of 2×SDS-PAGE Sample Loading Buffer to  $\;$  the tube.
- 2. Gently vortex to mix and incubate the sample at 95-100 °C for 5-10 min.
- 3. Magnetically separate the Immunomagnetic Beads and save the supernatant containing the antigen.

#### General Test System (for reference):

|                                    | Recombinant Protein  | Cell Lysate |  |
|------------------------------------|--|-------------|--|
| Sample Quality                     | 10μg add into 0.5mg cell lysate (without interfering proteins) | 0.5mg       |  |
| Final Volume                       | 300µL  |             |  |
| Incubate Time Room temperature, 2h |  | !h          |  |
| Elute                              | Using 10 μL of 2×SDS-PAGE Sam                                  | ple Loading |  |

## **Trouble Shooting**

| Problem                              | Possible Cause   | Solution   |  |
|--------------------------------------|--|--|--|
|                                      | Magnetic Beads<br>were frozen or<br>centrifuged                                      |  |  |
| Magnetic Beads aggregated            | Buffer was incompatible with magnetic beads  | Handle the<br>Beads as<br>directed in the<br>instructions                                      |  |
|                                      | Detergent was not added to the wash and bind solutions                               |  |  |
|                                      | Wash conditions<br>were too stringent<br>for the weak or<br>transient<br>interaction | Reduce the number of washes  |  |
|                                      |  | Lower the ionic strength of the wash buffer  |  |
|                                      | Interacting protein<br>was expressed at a<br>low level                               | Apply additional protein sample  |  |
|                                      |  | Use a more<br>sensitive<br>detection<br>system   |  |
| Failure to co-IP interacting protein | Buffer system was<br>not optimal for the<br>protein: protein<br>interaction          |  |  |
|                                      | Insufficient   | Elute sample in 30% acetonitrile 0.5% formic acid, then  |  |
|                                      | sample was loaded<br>on the gel for<br>Western blot<br>detection                     | Bring the sample back up in SDS-PAGE Sample Loading Buffer and load entire elution fraction on |  |

| Problem                          | Possible Cause                      | Solution   |
|----------------------------------|-------------------------------------|--|
| Little or no protein is detected | Protein degraded                    | Include protease<br>inhibitors<br>(PMSF) in the<br>lysis buffer                |
|                                  |                                     | Use new lysate or lysate stored at -80° C                                      |
|                                  |                                     | Verify protein<br>expression by<br>SDS-PAGE or<br>Western blot                 |
|                                  | No or minimal protein was expressed | Analysis of the lysate using an positive control as a reference                |
|                                  |                                     | Increase the amount of lysate used for IP/Co-IP Use a more sensitive detection |
|                                  |                                     | sensitive<br>detection<br>system   |
